TurfFertilizer -Pre & Post Emergent Weed Control												
TurfFertilizer -Late Fall												
Snow Removal												

This table represents a general representation of when operations occur and may begin or end in the month before or after the shaded month. Some operations take place at several different times of the season, depending on weather and plant type. Shaded boxes indicate the time of the season that these operations usually occur and may take place over the course of several months. For example, ornamental tree pruning for the entire property would normally take place in the months of July-Sept but are not limited to these months.
